

Outcomes of SUMERNET Phase 3

***Boundary Partners:** Individuals or organisations directly engaged through Phase 3, with the expectation to influence their behaviours.

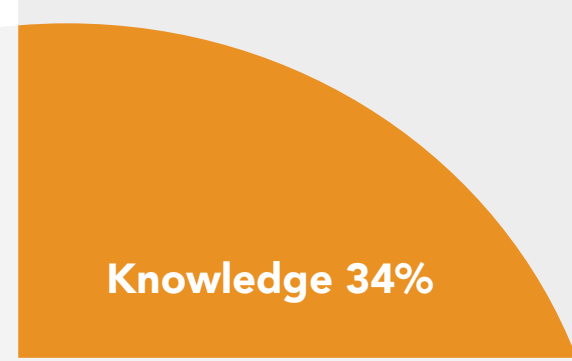

***Outcomes:** desired changes of behaviour, performance, relationships or conditions of SUMERNET's boundary partners.

SUMERNET's Contributions

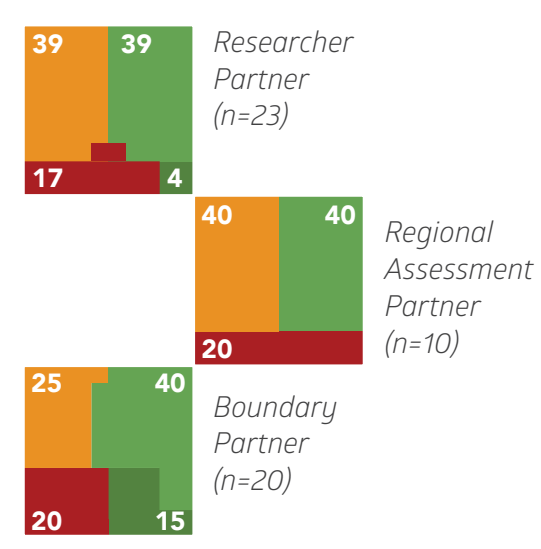

SUMERNET Phase 3 Outcomes 2014-2017

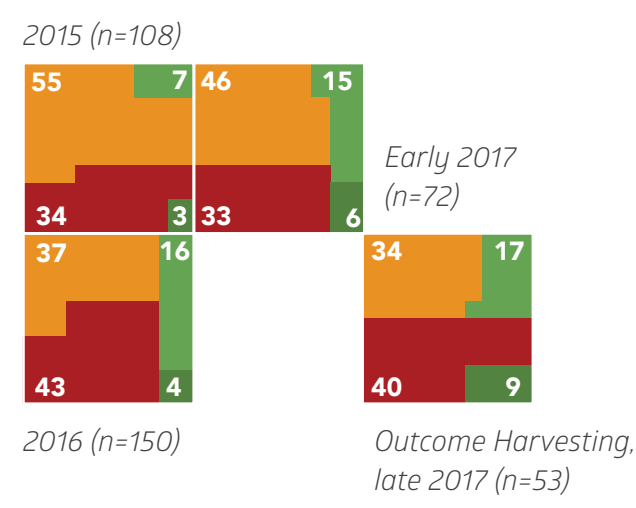

By the end of the programme, 40% of outcomes were on 'Practice 1' (early one-off practice), 34% on knowledge, 17% on attitude, and 9% on 'Practice 2' (recurring practice). These results demonstrate the theory of change of SUMERNET where we expect practice to be higher by the end of phase 3. Previous annual monitoring has showed incremental improvements in the KAP rubric. When broken down in terms of the type of partners, knowledge and 'practice 1' outcomes were reported by research and regional assessment partners. In contrast, boundary partners report a higher improvement in 'practice 1'. This is expected as it is the behaviour of the boundary partners that SUMERNET seeks to influence.

Outcomes by type of partner

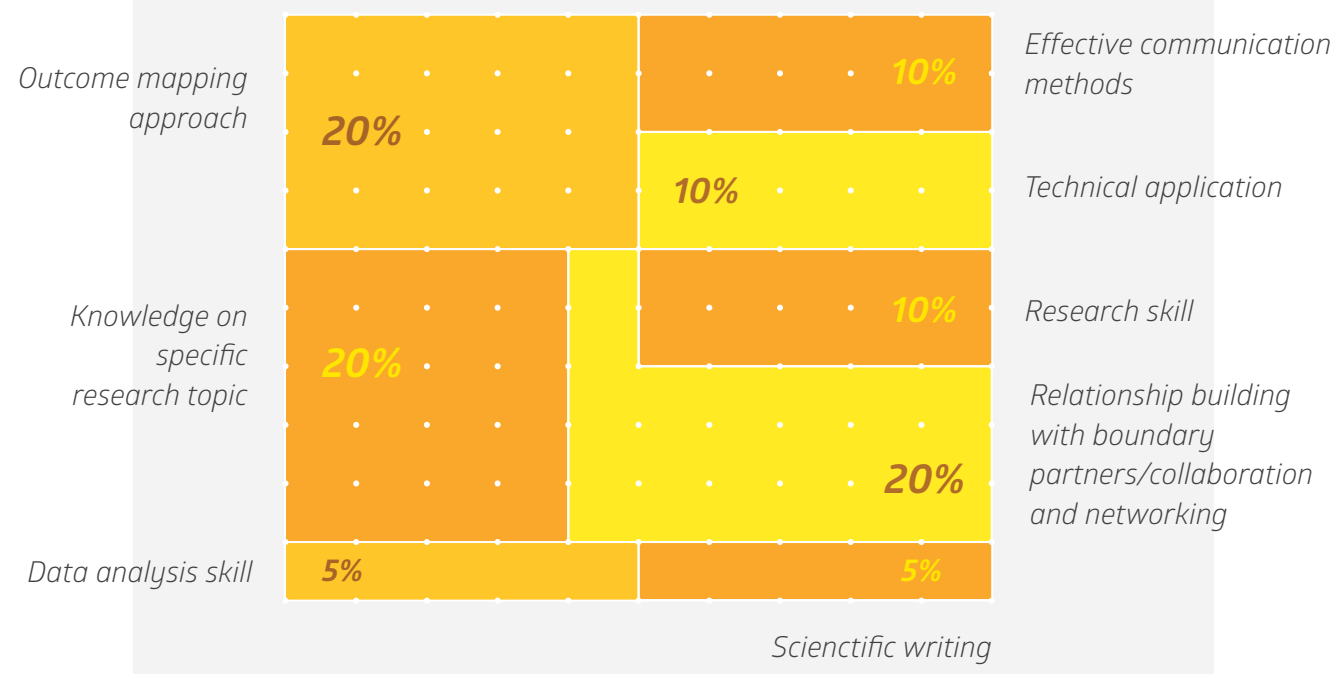

Outcomes from 2015 to 2018

- Knowledge
- Attitude
- Practice1
- Practice2

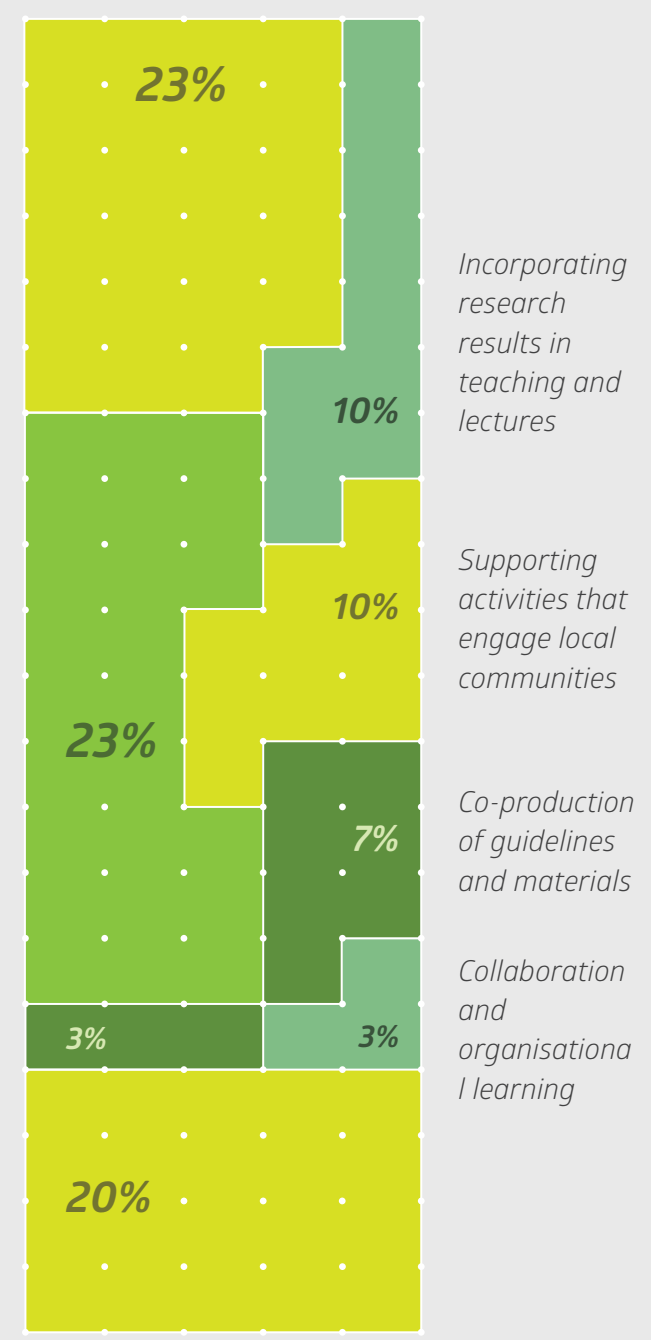

*Knowledge Changes for SUMERNET Partners (n=20)

Practice 1 40%

Practice 2 9%

Dissemination of research and policy products and messages

*Practice Changes for SUMERNET Partners (n=30)

Outcome Harvesting

As a way of assessing the achievement of outcomes under SUMERNET Phase 3, SUMERNET Secretariat undertook an outcome harvesting exercise. The purpose of outcome harvesting is to find evidence of what has changed ("outcomes") and, then, working backwards, determine whether and how an intervention has contributed to these changes.

SUMERNET attributed outcomes were categorised into four types: knowledge change (K), attitude change (A), early practice change (P1) and advanced practice change (P2). Additionally, SUMERNET Phase 3 also identified cases of change that extended beyond the outcomes, which here have been identified as impacts.

The achievement of these outcomes and impacts have been attributed to five categories of interventions in SUMERNET Phase 3, including research grants, capacity building, facilitating networking and partnerships, participation in events and policy engagement. This poster visualizes SUMERNET's results to capture the perception of changes ("outcomes") by research partners and boundary partners as a result of SUMERNET Phase 3 interventions.
